Waste Minimization

The following conditions have contributed to the decreased amount of waste generated over the past few years:

1. We have increased the amount of rinse cycles on the plating baths to decrease the amount of waste generated from the plating lines.
2. Nickel and cyanide are collected in dragout tanks and transferred back into the plating baths which has decreased the amount of hazardous waste generated.
3. The waste is dried before shipping to decrease the total volume of the hazardous waste.

During 2013 the amount of waste decreased because we clean our pit one time a year.
